

YOUR NEW ZEALAND MANUFACTURED ORGANIC SOLUTION
TO A CLEAN GREEN ENVIRONMENT

Dairy Farm

Case Study

PROBLEM

- Farm with a herd of 500 cows and effluent being discharged into a 120-180 day storage pond.
- Had odours and pond crusting - weeping walls blocking.

SOLUTION

- Primed pond with 40 litres Bio-Zyme Industrial then followed up with 1 litre per day pouring down drains of cowshed to effluent pond.
- Resulted in reducing odour, crusting and solids in pond. Helps weeping walls work more efficiently and keeps the irrigation jets clean and clear for debris.
- After effluent was irrigated on paddocks the grass was more palatable for the cows and livestock, while still being cost effective.

Have continued using Bio-Zyme since Dec 2018
